## IN THE CLAIMS

Claims 47-51 are cancelled and replaced with the following new claims 93-97.

To cover the fee for the additional independent claim, a Zcheck (#4752) for \$74.00 is enclosed herewith.

93. An arrangement comprising:

a source operative to provide, between a first and a second DC terminal, a DC voltage of substantially constant magnitude;

an inverter circuit donnected with the DC terminals and functional to provide an inverter AC voltage between a reference terminal and an inverter output terminal; the inverter AC voltage being of frequency several times higher than 60 Hz and otherwise characterized in having a waveshape consisting of sinusoidally-shaped voltage pulses of alternating polarity; the inverter circuit including a tuned L-C circuit connected in circuit with the inverter output terminal and the reference terminal; the L-C circuit having a tank capacitor parallel-connected with a tank inductor and being resonant at or near the frequency of the inverter AC voltage; the inverter circuit 100 FS 09/02/94 08196812
